DIP 'N' SPRAY IODOPHOR TEAT DIP

DIP 'N' SPRAY

Iodophor teat dip is a "dual use" product to assist in the control of mastitis in dairy cows and as an aid in preventing teat cracking and chapping.

It can be equally effectively used as a standard type teat dip or in the newer method of spraying the udder area using a suitable pressure spray. In either case, every cow should be treated after each milking.

DIP 'N' SPRAY

Contains 2% available iodine which at use dilution as a teat dip results in the teat being covered by a plastic skin containing 5000 parts per million of iodine, which rapidly kills mastitis producing bacteria.

In addition, DIP 'N' SPRAY contains several emollients which aid in keeping the teat skin smooth and soft, and in many cases saves the use of an ointment or cream.

METHOD OF USE

AS A TEAT DIP

Mix one part DIP'N'SPRAY with three parts cool water, and using a small non-metal cup or container, dip each teat of each cow after every milking. Under normal conditions no added oils are necessary. In cases of heavy mud or extreme drying, up to 20% of the water can be replaced with TASMAN EMOLAN for preference or glycerine.

**DO NOT ADD PARAFFIN OR BLOAT OIL TO DIP 'N' SPRAY AS AN EMOLLIENT
AS THIS WILL DEACTIVATE THE SOLUTION.**

AS AN UDDER SPRAY

Using a suitable pressure sprayer, make up five litres of spray by mixing 400 ml DIP'N'SPRAY with cool clean water. Up to one litre of water can be replaced by a suitable soluble oil (such as EMOLAN or glycerine). After milking thoroughly spray udder area to ensure all-over cover of cows teats.

The Product Information Sheet supersedes all previous issues for this product. Information contained herein is offered in good faith as being true and accurate to the best of our knowledge, but as the conditions of use are beyond our control, no guarantees are either stated or implied.

Where health or safety data given discloses a risk to the user or the environment, it is the responsibility of the purchaser to pass on the information to employees who may be using the product, ensuring that adequate safety procedures are used, including good industrial hygiene.
